PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience building full-stack and cross-platform system architectures using Python, FastAPI, React, PostgreSQL, and REST APIs. Skilled in object-oriented programming, Git-based version control, and end-to-end development lifecycles from design and testing to deployment and documentation. Strong problem-solving ability and a fast learner, currently expanding into mobile application development (Kotlin, Swift, Flutter) and eager to contribute to a collaborative mobile development team.

EDUCATION

MIT Mysore — B.E. Computer Science and Engineering | CGPA: 7.75 | Expected 2027
STG PU College — Pre-University (Science) | 93.16% | 2023

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C, SQL, PHP

Currently Learning (Mobile Development): Kotlin, Swift, Flutter

Frameworks: FastAPI, React.js, HTML5, CSS3, Tailwind CSS, REST APIs

Databases: PostgreSQL, MySQL, MongoDB, SQLite

Developer Tools: Git, GitHub, Docker

Concepts: Object-Oriented Programming, JWT Authentication, Dependency Injection, Event-Driven Architecture, Multi-Agent Systems, Model Context Protocol (MCP)

PROJECTS

ULTRON

- Architected a modular AI operating system with a custom runtime, memory, telemetry, dependency injection, and local LLM integration.
- Applied clean, maintainable coding practices and Git-based version control throughout the entire development lifecycle, from design to deployment.

GIT_AI

- Built an autonomous AI developer agent that analyzes GitHub issues, generates code fixes, and automates pull requests.
- Strengthened debugging, testing, and version-control workflow skills by automating real-world code review and fix cycles.

CAPA (Context-Aware Personal Agent)

- Developed a context-aware productivity platform using 3 agents, 3 MCP servers, and shared SQLite memory.
- Collaborated across the feature design and documentation process, contributing to technical planning and system architecture.

Krishi-Setu

- Built a FastAPI backend with JWT authentication, PostgreSQL, and location-based harvest discovery.
- Focused on clean API design, thorough testing, and high code quality to ensure a reliable user experience.

ACHIEVEMENTS

- Top 10 Finalist — Protothon 2026
- Coordinator — Hackverse Hackathon
- Participant — National Hackathon 5.0
- Participant — Solaris X Grand Hackathon
